3. The present title of the application is "Device and Method for Image Processing" (as originally filed).

Continued Examination Under 37 CFR 1.114

4. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 20-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nishiumi et al., U.S. Patent Number 5,973,704, "Three-Dimensional Image Processing Apparatus", class 345/475.

As per independent claim 20, an image processing device . . . comprises: determination means for determining whether or not said objects are in a specific area . . . and camera angle adjusting means for adjusting the angle of said virtual camera based on the results . . . ; wherein the angle of the virtual camera is 0 degrees when said object is not in said predetermined area . . . adjust by the camera adjusting means to a value other than 0 degrees . . . Nishiumi discloses determining whether or not a object exists between the camera and an operable object position and if so altering the camera perspective, col. 1, lines 5-12, col. 12, lines 42-67 and figure 20.

However, it is noted that Nishiumi fails to disclose determining if object are in a predetermined area. Nishiumi discloses determining whether an obstacle is between an object and camera. It would have been obvious to one of ordinary skill in the art at the time of the invention that the obstacle is positioned in a general predetermined area and therefore included in the obstacle determining means.

With respect to dependent claim 21, . . . camera angle adjusting means adjusts the angle of said virtual camera based on the results . . . Nishiumi discloses said camera position changing based upon said detection, figure 20.

With respect to dependent claim 22, . . . camera adjusting means adjusts the angle of said virtual camera in at least one of either the lateral and vertical directions . . . Nishiumi discloses in col. 12, lines 55-67.

Response to Arguments

7. Applicant's arguments, see Amendment E, filed 06/12/2003, with respect to the rejection(s) of claim(s) 20-22 under Nishiumi have been fully considered and are not persuasive.

Applicant argues that Nishiumi fails to teach determining whether or not objects are in a specific area and camera angle adjusting means for adjusting the angle. Applicant states that Nishiumi teaches determining means for determining whether an obstacle is located between the object and the camera. It is inherent that if Nishiumi teaches determining means for an obstacle, i.e. an object, and the camera, Nishiumi is determining based upon the obstacle's position in a certain area.

Allowable Subject Matter

8. Claims 17-19, 24 and 26-35 are allowed.

9 The following is a statement of reasons for the indication of allowable subject matter: The prior art cited fails to render obvious polygon tilting to improve a viewers' visibility.
